

Diagnostic Testing and Results Management

Ordering, preparation, review, escalation, and closure

Document ID	Version	Effective	Review due
NB-DIAG-501	1.0	2026-08-01	2027-08-01

FICTIONAL TRAINING DOCUMENT - SYNTHETIC DATA ONLY. Not a real healthcare provider, not clinical guidance, and not for patient care. All people and contact details are invented.

Owner: Diagnostics Lead
Approved by: Fictional Clinical Governance Committee
Classification: Training / public synthetic corpus

Document control and RAG metadata

Field	Value
Canonical title	Diagnostic Testing and Results Management
Document ID	NB-DIAG-501
Keywords	laboratory, ECG, echocardiogram, monitoring, results, tests, critical
Authority	Diagnostics Lead
Supersedes	None - initial synthetic edition
Applicability	Training simulations at Northbridge Cardiology Practice only

Retrieval rule

Retrieve whenever further tests are proposed, a result is cited, or a medication plan depends on diagnostic evidence.

1. Test-order minimum dataset

- Patient identifiers and ordering clinician.
- Test name, clinical question, priority, target date/window, and relevant medicine/context.
- Preparation instructions from the current test protocol; do not invent fasting or medicine-hold requirements.
- Named results owner, backup owner, and review deadline.
- How and when the patient will receive results.

2. Test pathways

Test	Typical fictional use	Preparation rule	Review workflow
Renal function/electrolytes	Medication baseline and follow-up; volume/electrolyte assessment	No generic fasting instruction; follow laboratory order	Electronic flag plus named clinician review
Full blood count	Bleeding/anaemia review; therapy monitoring	Follow laboratory order	Same-day review for critical flag; otherwise within two working days
Liver tests	Baseline or medicine-specific monitoring	Follow laboratory order	Clinician compares with prior values and indication
Lipid profile	Baseline/response assessment	Use current local laboratory protocol; do not assume fasting	Medication review team
12-lead ECG	Rate, rhythm, conduction, interval assessment	Record symptoms and medicines; no medication hold unless specifically ordered	Qualified clinician interprets; agent may quote signed interpretation
Echocardiogram	Structure/function assessment	Preparation instructions from diagnostics booking	Accredited report; cardiology review; compare prior study
Ambulatory rhythm monitor	Intermittent symptom/rhythm correlation	Diary and device instructions supplied at fitting	Rhythm team reviews report and symptom correlation
Blood pressure monitoring	Confirm pattern and treatment response	Validated device, cuff, technique; diary as instructed	Clinician reviews readings and context, not isolated value alone

3. Result status vocabulary

Status	Meaning
ORDERED	Requested but not yet performed
COLLECTED/PERFORMED	Specimen/test completed; no final report yet
PRELIMINARY	Not final; do not treat as definitive

Status	Meaning
FINAL - UNREVIEWED	Result available; named clinician action outstanding
FINAL - REVIEWED	Clinician reviewed and documented action
COMMUNICATED	Outcome communicated through approved channel
CLOSED	All required actions, bookings, and documentation complete

4. Abnormal and critical results

The agent does not independently define a result as critical. It preserves the laboratory/device flag and routes it according to the configured pathway. A value outside a displayed reference range may be described as 'outside the supplied range', not diagnosed.

- Confirm patient and result identity.
- Record value, unit, reference range, flag, timestamp, and trend.
- Contact named results owner; use duty clinician if unavailable.
- Document clinical action and patient communication.
- Create and track any repeat test or appointment until closed.
